OBJECTIVE

Fullstack developer with 1+ year of hands-on experience shipping production web applications with .NET (C#) and Angular. I own features end-to-end — from database and REST APIs to responsive UI — turning complex requirements into clean, reliable software. Comfortable across SQL Server / Oracle / MongoDB and real-time SignalR, I use AI daily to develop and debug faster.

- Develop clinical form modules and statistics dashboards on Angular (Chart.js + Leaflet) and WPF desktop tools with DevExpress, backed by REST APIs over a dual MongoDB + SQL Server / Oracle data layer.
- Integrate HL7 FHIR R4, real-time SignalR notifications and JWT auth; use AI tools (Claude, Copilot) to speed up development.

- Implemented JWT auth with role-based access, product / inventory / order & purchase management, staff payroll & timekeeping, and online payment via VNPay & MoMo (plus COD).
- Worked with SQL Server (stored procedures via mssql + Prisma), ExcelJS report export and image upload; analyzed requirements and joined training on soft skills.
